Réciproque de la propriété de Thalès

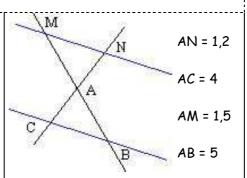

D'une part :

$$\frac{AN}{AC} = \frac{3}{\dots} = \dots$$

D'autre part :

$$\frac{AM}{AB} = \frac{\dots}{6} = \dots$$

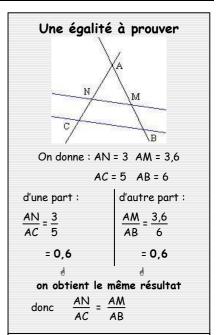

Donc $\frac{AN}{AC}$ $\frac{AM}{AB}$

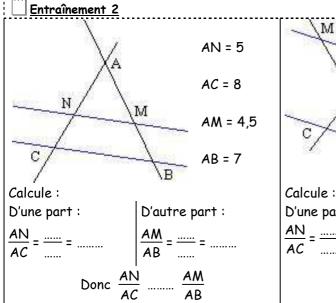

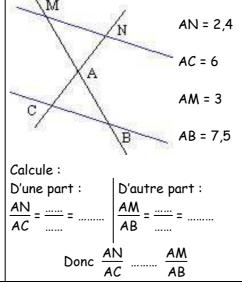

Calcule:

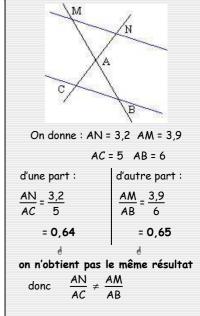

D'autre part : $\frac{AN}{AC} = \frac{1.2}{....} =$ $\frac{AM}{AB} = \frac{....}{5} =$

Donc
$$\frac{AN}{AC}$$
 $\frac{AM}{AB}$

Entraînement 3

- 1. Construis la figure suivante en commençant par le triangle PQO.
- 2. Calcule $\frac{OR}{OP}$ et $\frac{OS}{OO}$

5,6 cm 8 cm 7 cm 10 cm 5 cm

3. Les droites (RS) et (QP) sont-elles parallèles?
